

DRY SUIT

APPLICATION: Dry suits are rugged, streamlined, and form-fitting dive suits, which are used for cold-water diving exposure. Combined with the appropriate undergarment insulation, the self-donning dry suit provides superior thermal protection as opposed to standard wet suits.

DESCRIPTION: The CF 200 Dry suit manufactured by Diving Unlimited International is constructed with thin, four-way stretch material, which provides a close body fit. Designed to restrict water entry, the CF 200X dry suit features include an inlet valve with inflation hose, adjustable exhaust valve, zipper, suspenders, kneepads, a neoprene neck and wrist seals. Additional “Thinsulate” undergarments for 50-65° F water temperature are available.
