

EXO-26 FULL-FACE DIVING MASK

APPLICATION: [Wet-diving] The full-face diving mask is primarily used with the wireless communication system to allow underwater diver-to-diver and/or diver-to-surface voice communication. Full-face diving masks are also used in high current or diver-towed situations where the chances of losing the regulator or face mask from a diver's face must be precluded. The mask can be used with scuba or surface supplied gear.

DESCRIPTION: The EXO-26 full-face mask features a lightweight plastic frame, fully adjustable demand regulator (dial-a-breath), flexible nose pocket, automatic defogging with each inhaled breath, waterproof microphone, and waterproof speakers.
