

SUBMERSIBLE HYDRAULIC WINCH

APPLICATION: This hydraulically operated winch is designed to deploy an instrument package (typically CTD/Niskin bottle) into undersea depressions or holes that are not accessible by large submersibles and remotely operated vehicles.

DESCRIPTION: The winch is constructed of marine grade aluminum, contains 30 meters of 3mm Kevlar line, and is capable of deploying and retrieving objects weighing up to 100 lbs. at a maximum depth of 300 meters.
